#### Normal Q-Q Plot

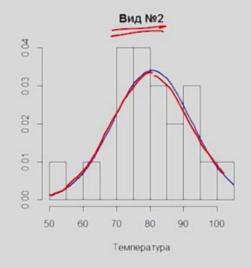

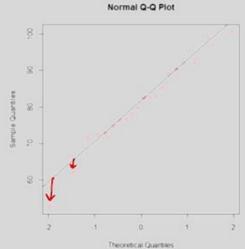

### Проверка распределения на нормальность

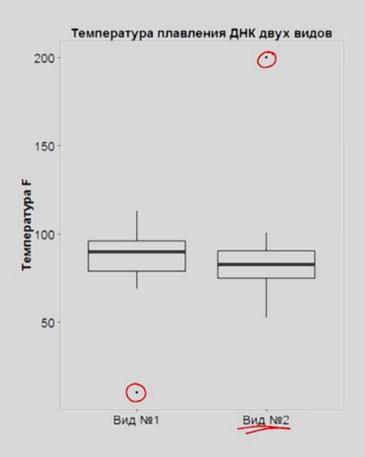

Shapiro-Wilk normality test, p=0.98

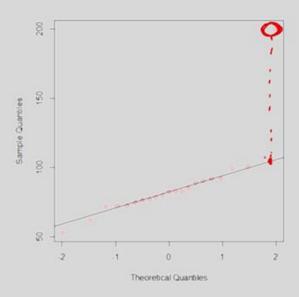

### Берегись выбросов!!!

Добавим по одному наблюдению в каждую выборку и в результате:

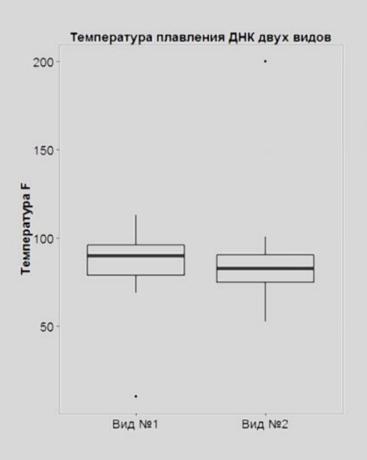

$$t = ?$$

$$p = ?$$

### Берегись выбросов!!!

Добавим по одному наблюдению в каждую выборку и в результате:

$$t = 0.03$$
  
 $p = 0.97$ 

Но если использовать непараметрический аналог t-критерия (Mann — Whitney U-test): p = 0.09
